

RAGWA ELSAYED

Product & UX · Healthcare Technology

Hospital EMR & imaging → biomedical research → kidney-screening device → lab robotics & automation → product, UX & informatics → building AI healthcare software

South San Francisco, CA · (415) 846-7517 · elsayed.ragwa@gmail.com

Healthcare technology professional with 13+ years across clinical, laboratory, and product work. My career began inside hospitals — supporting MRI/CT imaging and electronic medical record (EMR) systems in hospitals across Egypt and North Africa — and grew into designing and delivering software for Genentech/Roche, Natera, and 10x Genomics. I stay close to the people who use the system (scientists, lab operators, clinicians, and the engineers serving them), turn what I learn into clear product direction, and stay hands-on through prototyping, code, and rollout. My recent work centers on building AI-powered healthcare products. I do my best work in complex, multi-stakeholder environments where software has to be usable, compliant, and operationally fast all at once.

CORE COMPETENCIES

Product & Delivery Product ownership · discovery & requirements · user stories & PRDs · roadmap prioritization · Agile / Scrum · UAT · change management & adoption · full SDLC

UX & Research Customer interviews · usability testing · workflow & journey mapping · information architecture · interactive prototyping (Figma) · qual/quant synthesis

Hands-On Technical Python · JavaScript · HTML / CSS · React Native · SQL · REST / API integration · Git / GitHub · Jenkins · TestRail · CI/CD · AI-assisted development (Claude Code, Cursor, Lovable) · deploy on Vercel

Healthcare & Compliance Clinical & lab workflows · EMR / electronic medical records · LIMS & informatics platforms · genomics & drug discovery · GMP · HIPAA · SOC 2 · Computer System Validation (CSV)

PROFESSIONAL EXPERIENCE

Independent Product & UX Consultant — Healthcare & Enterprise AI Dec 2023 – Present · Remote

- Partner with healthcare and enterprise teams across the full arc — discovery, research, design, prototyping, and hands-on development.
- **CarePath AI** — developing an AI-powered patient-navigation tool with Santa Clara University (Dr. David C. Anastasiu) to help patients find and move through the right care pathway.
- **GlowAI** — designing and building a consumer wellness app (skin, hair, and weight analysis): user research → Figma → React Native, with personalized AI recommendations.
- **AIBold Core** — building a multi-tenant, event-driven AI-agents platform for business operations — agent workers, human-in-the-loop approvals, and audit across WhatsApp and LLM gateways, with contract-first APIs (OpenAPI / AsyncAPI) and full observability.
- Build and iterate on working software directly with AI-assisted development tools (Claude Code, Cursor, Lovable) and Vercel — concept to functional product in days.

Genentech / Roche — Product Owner & Informatics Systems Analyst Jun 2023 – Nov 2023

- Embedded with scientists in Small Molecule Drug Discovery to surface workflow bottlenecks affecting research productivity.
- Acted as the primary “voice of the customer,” bridging scientific users, software engineers, and lab operations.
- Translated complex research and computational needs into user stories, product requirements, and system capabilities; contributed to API design and data modeling.
- Helped design and deliver informatics systems that shipped into drug-discovery workflows — owning the full lifecycle from discovery and requirements through implementation, validation, release, and adoption.

Natera — Lab Informatics Specialist & Product Lead Jun 2022 – Jun 2023

- Led UX research and usability studies with 100+ lab operators, supervisors, and managers for LabVantage LIMS and the sample tracking portal.
- Designed and delivered four operational dashboards — deployed across labs, including shared TV-mode displays — giving real-time visibility into sample volume, equipment status, and resource allocation across three product lines (Panorama, Horizon, Prospera).
- Standardized design patterns and a component library to bring consistency across enterprise applications.

- Automated a previously manual SOC 2 access-review process with Python (cutting review effort ~80%); ran Snyk security scans and partnered with engineering to resolve critical vulnerabilities — all within a regulated GMP environment.

10x Genomics — Product Management & Software Automation Engineering

Jan 2021 – May 2022

- Led UX research and workflow redesign for Chromium Connect, the touchscreen software scientists use daily to run genomics instruments in GMP labs.
- Translated interview and usability findings into production-ready workflow improvements that shipped to the instrument — standardized terminology, consolidated multi-page flows, and added visual scanning aids, cutting page count ~60% and reducing user error in training.
- Defined enterprise interaction patterns, design standards, navigation, and user-guidance frameworks across the product.
- Built Python automation frameworks and CI/CD test infrastructure (Jenkins, TestRail); developed and validated gRPC/SDK automation supporting the robotics instruments.

Twist Bioscience — Process Designer & Automation Engineer

Feb 2020 – Jan 2021

- Designed digital workflows and user-friendly interfaces connecting robotics platforms, scheduling software, and enterprise lab systems (LIMS, SDMS, ELN, MES).
- Programmed Hamilton liquid-handling platforms; implemented workflow improvements with scientists and process engineers, then trained users and drove adoption.

Earlier Experience — Automation, Research & Healthcare Support

- LGC Biosearch Technologies — Automation Workflow Engineer · Quanterix — Automation Engineer · Eurofins / Genentech — Scientist, Laboratory Automation.
- Stanford School of Medicine — Research Associate · San Jose State University Research Foundation — Research Assistant · Philips Healthcare — Senior Technical Support Engineer, supporting diagnostic imaging and the Philips PMR electronic medical record (EMR) system in hospitals across Egypt.

EDUCATION

- **M.S., Biomedical Engineering** — San Jose State University
- **M.S., Biomedical Engineering** — Cairo University
- **B.S., Biomedical Engineering** — Cairo University

CERTIFICATIONS

- Google UX Design Professional Certificate
- MIT xPRO — Architecture & Systems Engineering
